

MC8 Search & Secure Procedure

- 1) Search and Secure team enters enclosure and proceed to upstream end. Team searches upstream area and resets Box 1.
Note: It is essential to check the sides, top, interior and around all apparatus as necessary.
- 2) Team proceeds downstream searching as necessary.
- 3) Team member verifies upstream roll up door is locked closed and resets Box 2.
- 4) Team continues downstream. One team member verifies MB7 hatch is closed and locked with an OPS padlock and resets Box 3.
- 5) Team continues downstream to portakamp entrance. A waits near entrance while B continues searching downstream, resets Box 4, verifies downstream roll up door is locked closed, resets Box 5, and rejoins A.
- 6) Team members exit enclosure and reset Box 6.

Note: Computing Division Storage area will initially be searched by Operations. After the search, Operations will lock both gates with Operations locks, if an access to the area is required, Operations will act as an escort or re-search the area prior to transporting Beam to MCenter.
